

## **IXS 2004 Manuscript Submission & Proceedings**

The proceedings of IXS2004 will be published as a Special Issue of the Journal of Physics and Chemistry of Solids (Elsevier Science, Oxford).

All manuscripts will be reviewed and must contain sufficient new material to justify publication in a major archival journal. The manuscripts will be typeset and proofs will be made available to the authors for approval prior to publication. The deadline for the receipt of the manuscripts is December 1, 2004.

### **Preparing Manuscripts**

Each contributed paper (poster) is allowed a maximum of 4 (four) printed journal pages. The invited papers are allowed a maximum of 8 (eight) printed journal pages. The manuscripts will be typeset; authors do not need to prepare camera-ready copy. You should supply 3 (three) hard copies of your manuscript together with an electronic copy containing the text in one of the popular formats such as MS Word, Tex, Latex, or WordPerfect. The figures should also be supplied electronically in any reasonable popular format, but please be sure to provide a good quality set of printouts as well. All authors will receive page proofs of the manuscript for their approval.

### **How to Estimate Journal Length from the Manuscript Copy**

The Journal of Physics and Chemistry of Solids publishes in a double-column format. Each column is 22.5 cm long; there are 2.5 journal lines/cm or 21 words/cm. (These counts are a bit different from what you may find by actually looking at a copy of the journal, but these are effective numbers, which take various formatting factors during typesetting into account.)

Authors should include an abstract of no more than 100 words. You need not try to estimate the space needed to accommodate the title, abstract, author affiliation, and related blank spaces, etc. Simply subtract 0.5 journal pages from your allowance to take these items into account. This leaves 3.5 journal pages for the body of a 4 page contributed paper, or 5.5 pages for an invited paper. Equivalently, you have 3300 words available for the body of a contributed paper or 6600 words for an invited paper, assuming of course that there are no figures, tables or equations. For a figure, table or an equation that can fit in one column width (i.e., is legible with a width of not more than 7.0 cm), estimate an effective vertical height by adding 2 cm to the actual height in order to account for the blank spaces necessary to separate a figure, table or an equation from the text. Then reduce the estimate of 3300 (or 6600) words above by 21 words/cm, taking into account all figures, tables, and equations.

For a figure, table or an equation that must be placed across the page requiring two columns, double the estimates of the previous paragraph and subtract 42 words/cm for the effective vertical height.

You will thus obtain an estimate for the total number of words of text available to you. Please note that the text here refers to all text such as figure captions, references, and the narrative in the manuscript.

If you follow the rules, you should have no difficulty staying within the page limits indicated.

### Submission of papers

The original and two copies of the manuscript should be sent to:

Dr. Ercan Alp  
Experimental Facilities Division  
Argonne National Laboratory  
9700 S. Cass Ave.  
Argonne, IL 60439, USA

Each paper will be refereed. If you are asked to referee a manuscript please provide your response as soon as possible.

If you are asked to respond to referee comments, please send your modified manuscript (original and two hardcopies) to the address given above.
